

backend API	available response types	frontend API
<b>cpaint</b> start() register() return_data() add_node() get_attribute() get_data() get_name() set_attribute() set_data() set_name()  <b>cpaint_node</b> add_node() get_attribute() get_data() get_name() set_attribute() set_data() set_name()	<b>TEXT</b> Most useful for non-structured responses. The fastest response type.  <b>OBJECT</b> The default response type. Useful for complex data structures. Data is sent as XML, parsed by CPAINT frontend.  <b>XML</b> Useful for external data sources. Websites, HTML, SOAP services, RSS / RDF feeds, ... OBJECT is often the more comfortable response type if data is not too complex.  <b>E4X</b> As of now supported by Firefox 1.5 only! Offers a more scripty approach to XML traversal.	<b>cpaint</b> call() set_debug() set_proxy_url() set_transfer_mode() set_async() set_response_type() set_persistent_connection() set_use_cpaint_api()  <b>cpaint_result_object</b> find_item_by_id() get_attribute() set_attribute()
<b>common mistakes</b> <ul style="list-style-type: none"> <li>- PHP4: add_node() returns the node object by reference. Use \$var =&amp; \$cp-&gt;add_node().</li> <li>- CPAINT assumes incoming data to be UTF-8. Use \$cp-&gt;start('ISO-8859-1') or similar if that's not the case.</li> <li>- backend functions must first be registered through \$cp-&gt;register('funcname')</li> </ul>	<b>call() parameter order</b> <ol style="list-style-type: none"> <li>1) backend URL</li> <li>2) remote method name</li> <li>3) local callback function</li> <li>4) 1st remote argument</li> <li>5) 2nd remote argument</li> <li>6) ...</li> </ol>	<b>common mistakes</b> <ul style="list-style-type: none"> <li>- Opera can't do POST prior to v8.</li> <li>- set_async(true) freezes the browser while request is underway.</li> <li>- requests that follow too fast are dropped when persistent_connection(true) is used.</li> <li>- cpaint.call() does not return the response. You must set up a callback function that takes the response as single parameter.</li> <li>- when using E4X, use &lt;script type="text/javascript;e4x=1"&gt; and avoid HTML comments within.</li> </ul>
<b>creating the response</b> <b>unstructured response:</b> <pre>\$cp-&gt;set_data('my data');</pre> <b>collections:</b> <pre>for (\$i=0; \$i&lt;10; \$i++) {     \$node =&amp; \$cp-&gt;add_node(         'col',         'id' . \$i     );     \$node-&gt;set_data(\$data[\$i]); }</pre> <b>creating nested nodes:</b> <pre>\$parent =&amp; \$cp-&gt;add_node(     'parent' ); \$child =&amp; \$parent-&gt;add_node(     'child' );</pre>	<b>CPAINT defaults</b> <b>proxy URL:</b> none <b>transfer mode:</b> GET <b>asynchronous:</b> yes <b>response type:</b> OBJECT <b>persistent conn.:</b> no <b>CPAINT API:</b> yes	<b>working with the response</b> <b>finding a specific node:</b> <pre>r.find_item_by_id('nodename',     'nodeid');</pre> <b>accessing node attributes:</b> <pre>r.get_attribute('name');</pre> <b>walking through a collection:</b> <pre>for (i=0; i&lt;r.col.length; i++) {     alert(r.col[i].data); }</pre> <b>accessing nested node data:</b> <pre>r.child[0].data</pre>
